PLAN OF THE TEXT

The words in this Dictionary are arranged in groups, derived and related words being placed under the word chosen as the main-entry.

Each main-entry is given a simple phonetic re-spelling to assist in pronunciation, and where a word of more than one syllable occurs, a mark is made to indicate where the stress should lie. Sub-entries are given separate spellings only where the pronunciation differs from that of the main-entry, or where, by reason of length, it may give difficulty to the reader.

The part of speech of each word is given immediately after its phonetic spelling, and the derivation appears at the end of each paragraph.

The following example will help to make these arrangements clear:

main (mān) *a* principal, first in size, importance, etc.; essential, sheer. -- *n.* the chief part; strength, as in *might and main*, a wide expanse of land or ocean; the principal pipe in water, gas, or electricity system. -- *main² brace n.* the brace of the main-yard. -- *to splice the main-brace*, to hand out a double ration of rum. -- *main-chance n.* self-interest. -- *main² door n.* a front door giving access to ground-floor house. -- *main² land n.* a continent as distinct from islands. -- *main²ly adv* -- *main² mast n.* the principal mast of a ship -- *main² road n.* a highway, esp. between two towns. -- *main² sail n.* the principal sail on the main-mast. -- *main² stay n.* the rope from the maintop to the [deck; (*Fig.*) the chief support (O.
